Open Autocad and connect to your account and add a new file. Click the Catalog tab. Click on the + symbol. Click Customize Tab, Import tab. Select a CNT file you created with the keygen and click OK. Click OK and select the file. You will see a green icon which represents you have an active CNT file. How to check if your CNT file is valid In my case, I have created a CNT file using the Autocad 2016 keygen. I have installed Autocad 2016 and activated it. I can now create a CNT file. I am going to upload a sample CNT file into Google Drive and I will use it to create a CNT file. In the same folder I also have a list of sample design that I have created in Autocad. I will check if my CNT file is valid. I will create a new file in Autocad 2016 with the same name of my CNT file. I will check the option of including the CNT file in the project. Here is the screenshot of the option that allows me to check the validity of my CNT file. After that I will copy the design in a new sheet and save the new file. Now I am ready to use the CNT file and import it. So the CNT file that I have created is valid because I can see the green symbol. How to open and use the CNT file I will open the CNT file and start the process of defining the geometries. To begin, I can create a new drawing by pressing Ctrl + N. In the Import tab I will select my CNT file and click OK. In the drawing I will select the "Select AutoCAD object by category" button. This will allow me to select the objects of the CNT file. In this example I will select only the wire. I can select the objects using the regular or the object-based selection. I will select the regular one. I will now drag the wire and drop it on the drawing area. I will close the wire window because I do not need it anymore. I will now create a face in order to make the wire mesh. I will select the face in the wire window and use the standard tool. I will create a face
