## SuperOneClick 1.9.1.zip ^HOT^

# [Download](#)

May 12, 2554 B.C. - I use SuperOneClick 1.9.1 files in my script and successfully root. I'm asking this because the sooperoneclick zip I downloaded contains . exe file is missing. Instead, it contains .py file called superwin10\_1\_1.py located in the .py folder. I have a copy of the .exe file from that folder which is loaded into the shell. I run the script and everything runs smoothly, but it's not good practice to just run the .exe file from the .py folder. It's like I'm doing this to make sure everything is okay. I had to download the .exe file first and run it. If I did it in the script itself, then everything would break.

## SuperOneClick 1.9.1.zip

How to use Superoneclick (SuperOnClick tool): 1. Download the 2.3 Android Emulator from the Google Play Store. 2. Open the SuperOnClick 1.9.1 folder where you downloaded the SuperOnClick tool and extract it using WinRAR. 3. Run the SuperOnClick tool and choose "install ZIP package from the root of the flash drive". 4. In the installation dialog, make sure to tick "Skip if everything works." 5. After it is installed, you may exit the application and reboot the flash drive. 6. Run the SuperOnClick tool again and choose "Extract Zip Package to the SD card root." (Replace "SD" with the real name of the file system of your flash drive.) 7. Choose "install zip package to the SD card root" and click the "Update" button. The installation is done. 8. Press OK to reboot the phone. The SuperOneClick tool is already installed on the phone, you only have to reboot the phone. 9. In the next dialog, choose SuperOneClick 1.9.1 and choose the new device "boot partition". 10. Click the button "Install" and the installation is done in a few seconds. 11. Run the SuperOnClick tool once more and choose "Update Firmware", select "update RIL" and the update is done. 12. Choose "Restore Factory Settings" and you are done. Pre-requisites: 1. The latest SuperOneClick tool. You can download the latest version of the tool at SuperOneClick website or from the play store 2. A rooted Android phone. If you are not rooted, please proceed to the next step and root your phone first. 3. A flash drive with a minimum size of 8 GB Warning: 1. You need a rooted Android phone for this tutorial to work. If you have an unrooted phone, be sure to follow all steps carefully to make a complete backup of the user data before trying to install any ROM or kernel on your phone. 2. Make sure that the SuperOneClick tool is installed. 3. Make sure your phone is unlocked for flashing 4. Make sure the USB driver is installed and working with the phone when you try to install.
